About this learning activity

In this module, you'll learn how data visualization helps analysts communicate data stories and the role that feedback plays in refining them. You'll explore best practices for data visualizations, including adding clear labeling and descriptions on charts and graphs. You'll learn about documenting changes during the data analysis and visualization processes. And you'll find out how analysts use data visualizations to create self-serve dashboards.

Learning objectives

After completing this module, you should be able to:

- Apply best practices for labeling and documenting data visualizations
- Evaluate chart labels and descriptions
- Document the visualization process for future analysis
- Describe how to create self-explanatory charts and dashboards

Lessons

1. Using feedback to improve presentations
2. Annotating data visualizations
3. Interactive data visualizations
